FARADAY IN A BOX

MODULAR WALL PANEL SYSTEMS FOR OPTIMAL SIGNAL PURITY, SECURITY & DEMO ENVIRONMENTS.

- Modular Wall Systems for Optimal Signal Purity & IP Security.
- Shielding Technology for the Real World!
- Radio Frequency attenuation up to -45dB
- Empowers Wireless Devices to Perform as Planned & Tested.
- Keeps Your Demos Protected From Surrounding Interference & Rogue Networks.

CONNECTIVITY FOR PIONEERS

GET YOUR IDEAS OUT OF THE LAB

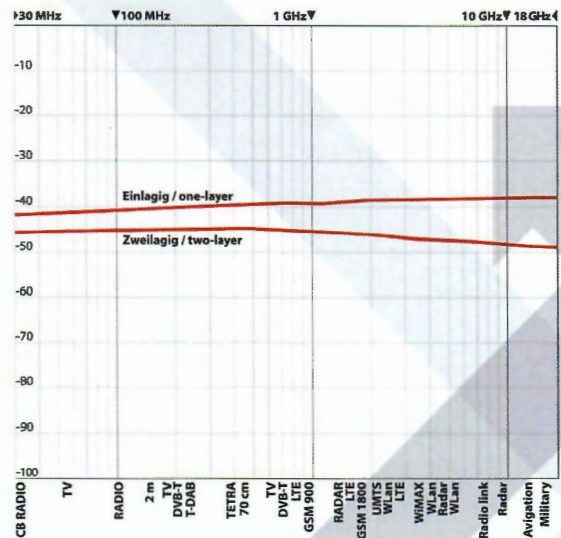

Lab environments provide perfect conditions for connectivity and signal purity. But what happens when you step out onto the showroom floor?

The tradeshow floor is a chaotic confluence of signals, noise and interference. This enemy of a successful demo can put your project at risk. Firewalls by TSE brings order to the chaos... recreating lab-like conditions using **state-of-the-art shielding technologies**.

This ground-breaking and patented, modular wall-panel system is an industry game changer! Engineered and ready-to-go, this "Faraday in a Box" means, no more labor hours wasted on preparing, wrapping, taping, or bonding. And, with an average of -45dB of radio frequency attenuation, Firewalls can effectively attenuate the RF interference to an unusable signal, allowing your wireless networks to work as intended.

Now, you can guarantee clean, unadulterated product demonstrations at a price you can afford.
